As the world converges in Dubai for the powerful 13-day COP28 climate conference, it's worth noting that COPs, which started in 1995, have evolved significantly. With this, the pivotal question also emerges: Have we truly made substantial progress since 2015 when nations globally committed to act under the "Paris Agreement"? Are we ensuring a brighter world for our children and the future generations that follow or have we withered away from our collective mission and resolve of 2015?

Epic floods, wildfires, and storms batter countries across the world. Scientists say that global temperatures that have already risen at least 1.1C will probably breach the 1.5C limit for at least one of the next five years. As per the UNEP report, the world is currently headed for 2.5C to 2.9C warming over the pre-industrial period. The climate mission still needs to be accomplished with 2023 on course to be the warmest year on record.
